(54) INFORMATION SERVICE SYSTEM

(57) Abstract:

PURPOSE: To register and update data of a service file 14-0 serving information changing timewise without direct operation of an electronic mail device 1.

CONSTITUTION: A service file 14-0 is revised from a telephone set 2-2 connected to, e.g. a communication line 4 without the direct use of an electronic mail device 1. In this case, the telephone set 2-2 is used to enter a prescribed identification code 22 representing the registration mode at first. Thus, the electronic mail device 1 is switched to the registration mode and data entered from the telephone set or the like are registered in the service file 14-0. Thus, no exclusive operator is required for the electronic mail device and the operability of the entry of service information is improved.
